DEADBEEF
User Manual

Preface

– –

Within this document, the following keywords and symbols are used to emphasise certain information:

!

Information on limitations of the software, background knowledge, and user interactions that may damage existing files on the computer.

---

i

Insightful information on how to use *DEADBEEF* to its full potential.

⚡

Known bug or issue that must be worked around.

Contents

1 Shortcuts

Table 1: DEADBEEF shortcuts

	Name	Shortcut	Description
i	About	Shift+F1	displays version information
	Documentation	F1	opens the documentation
	toggle log	Ctrl+L	opens / closes the log window

2   Command line interface

usage: DEADBEEF.py [−h] [−−logfile LOGFILE]

Args that start with '−−' (eg. −−logfile) can also be set in a config file
(DEADBEEF.ini). Config file syntax allows: key=value, flag=true, stuff=[a,b,c]
(for details, see syntax at https://goo.gl/R74nmi). If an arg is specified in
more than one place, then commandline values override config file values which
override defaults.

optional arguments:
  −h, −−help   show this help message and exit
  −−logfile LOGFILE   logfile name.
